EXPERIENCE

Full Stack Software Engineer Co-op | Quill and Pigeon | Portland, ME

Jan 2025 – Aug 2025

- Shipped commerce features across a multi-tenant Next.js and TypeScript platform used by 500+ registered users and 1,000+ completed orders, and added event tracking to measure product usage
- Built the customer-facing AI assistant on the Vercel AI SDK and the platform's n8n orchestration workflows, with OpenAI/ Claude provider failover and Langfuse tracing on model calls
- Designed a Medusa and Stripe subscription-credit system with a per-credit ledger, line-item reservations, atomic rollbacks, and idempotent webhooks
- Implemented Meilisearch product discovery across the stack: catalog sync, backend search, vectorization workflows, and the product-listing and search UI with filter drawers
- Built an AWS serverless inbound-email pipeline (SES, SNS, SQS, Lambda) with MIME parsing, conversation threading, and Postgres persistence
- Wrote automated tests that maintained 90% Vitest coverage across the platform, commerce services, and AWS infrastructure code
- Worked directly with the founder on Next.js performance improvements that reduced production page-load time by 50% in Vercel Analytics; also reviewed team PRs and owned staging-to-main releases

Full Stack Web Application Developer | Tata Consultancy Services | Pune, India

Aug 2020 – Aug 2023

- Promoted twice in three years, moving from assigned feature work to running releases through dev, QA, UAT and production, tuning performance, and mentoring 4 junior developers on enterprise financial applications
- Delivered full-stack features for tax-withholding and transaction-processing systems in C#/.NET, ASP.NET Core, and Angular for a large U.S. investment-management client whose engagement recorded a 95% customer-satisfaction index in FY2022
- Improved financial batch and data-access performance by approximately 15% on average through batching, reference-data reuse, and MongoDB/DynamoDB query and index tuning, measured in Splunk

Software Engineer | Cradiant IT Services | Pune, India

June 2019 – July 2020

- Built a C/C++ report-compression pipeline using LZ77, Markov-chain modeling, and range coding, reducing roughly 1 GB reports to about 280 MB (approximately 3.5× compression) and saving roughly 10 GB of on-premises storage per day
- Automated much of a manual reporting workflow with a Python and Pandas pipeline over thousands of records, cutting manual reporting time by approximately 40%

TECHNICAL SKILLS

AI & LLM: OpenAI API, Claude API, Vercel AI SDK, LangGraph, Langfuse, MCP, n8n

Languages: TypeScript, JavaScript, Python, Java, C#, C/C++, SQL

Frontend: React, Next.js, Tailwind CSS, Angular, React Email

Backend: Node.js, REST APIs, Microservices, Spring Boot, FastAPI, ASP.NET Core, Medusa, JPA/Hibernate

Cloud & DevOps: AWS (Lambda, S3, SES, SQS, SNS, CDK), Docker, GitHub Actions, CI/CD, Jenkins, Vercel, Railway

Data & Payments: PostgreSQL, MongoDB, DynamoDB, Oracle, MySQL, Supabase, Prisma, Meilisearch, Stripe, OAuth 2.0

PROJECTS

AI-Powered Code Review Tool

Aug 2025 – Dec 2025

- Built an AI code-review tool in Next.js on the OpenAI API that flags coding-standard, security, and performance issues across 10+ programming languages, with Supabase auth and saved history

F1 Race Briefing

Jan 2026 – May 2026

- Developed a race-briefing app with a Next.js frontend and a Python FastAPI backend, and a LangGraph agent pipeline that generates each briefing

EDUCATION

Northeastern University

Portland, ME

Master of Science in Computer Science, **GPA: 4.0/4.0**

Jan 2024 – May 2026

Savitribai Phule Pune University

Pune, India

Bachelor of Engineering in Computer Engineering, **GPA: 9.7/10**

June 2016 – May 2020

AWARDS & LEADERSHIP

- Runner-up, Northeastern University Entrepreneurial Idea Pitch Competition (Fall 2024); Star Performer, TCS (Q1 2021); Squash Club Lead, Northeastern University
